12.  Note the attached Information Disclosure Statement(s).	(PTO/SB/08) Paper No(s).		
13.  Other:			

Continuation of 11. does NOT place the application in condition for allowance because:

In response to the applicant's argues on pages 6-9 with respect to the claim 1,13,14 that the Shore references does not teach " a variable inductor." The examiner respectfully disagrees. In fig. 1,5 and col.6 lines 21-27, Shore teaches inductor (L22 of fig.5) tuned super regenerative circuit (i.e. receiver circuits) for operation and inductor have a value within a range of 52 nH to about 62 nH (i.e. inductor L22 is a variable).

In response to the applicant's further argues on pages 6-9 with respect to the claim 1,13,14 that the Shore references does not teach "inductor being variable during operation of the receiver for aligning the receiver." The examiner respectfully disagrees. Shore teaches inductor (L22 of fig.5) is tuned in a super regenerative circuit (i.e. receiver circuits) for operation and inductor have a value within a range of 52 nH to about 62 nH (see fig. 1, 5 and col.6 line s 21-27).

Shore further discloses (see col.6 lines 24-27) in practice and well known in the art and one having an ordinary skill in the art, the tuned or operation frequency circuits (26) will be set by the inductor L22 (i.e. inductor L22 should have variable values for tuning during the operation of the receiver circuits, although there is no exclusive support in the applicant's submitted specifications "during the operation" but it is an obvious practice that the circuits must be tuned during the phase of operation). Therefore, the rejection is maintained.
